

**Nebraska Risk and Protective Factor  
Student Survey Results for 2003**

**Region 4  
Profile Report**

**Administered by the Nebraska Health and  
Human Services System and the  
Nebraska Department of Education for  
Nebraska Partners in Prevention**

# Introduction

## 2003 Region 4 Risk and Protective Factor Student Survey Report

This report summarizes the findings from the 2003 Nebraska Risk and Protective Factor Student Survey, the first implementation of a biennial survey of students in grades 6, 8, 10, and 12. The survey was designed to assess adolescent substance use, anti-social behavior, and many of the risk and protective factors that predict adolescent problem behaviors. The Nebraska survey is adapted from a national, scientifically validated survey and contains information on the risk and protective factors that are 1) locally actionable, 2) can not be obtained through any other source, and 3) are more highly correlated with substance abuse. While planning prevention services, communities are urged to collect and use multiple data sources, including archival and social indicators, assessment of existing resources, key informant interviews, as well as data from this survey.

Table 1 contains the characteristics of the students who completed the survey from your community (e.g. school district, county). When using the information in this report, please pay attention to the number and percentage of students who participated from your

Table 1. Characteristics of Participants				
Year of Survey	2003			
	Community		State	
	Number	Percent	Number	Percent
Total Students	3402	100	25408	100
<b>Grade</b>				
6	720	21.2	5951	23.4
8	845	24.8	7045	27.7
10	957	28.1	6520	25.7
12	880	25.9	5892	23.2

White	3155	82.8	22284	82.9

## Contents:

### Introduction:

- Background of Survey
- Characteristics of Participants (The ethnicity categories may add up to more than 100% because students were allowed to select more than one race/ethnic category)
- Risk & Protective Factor Model of Prevention

### How to Read the Charts

### Tools for Assessment and Planning

### Data Charts:

- Substance Use & Antisocial Behavior
- Risk & Protective Factor Profiles
- Sources & Places of Alcohol and Cigarette Use

### Risk and Protective Factor Scale Definitions

### Data Tables

- Number of Students Who Completed the Survey
- Lifetime ATOD Use
- 30 Day ATOD Use
- Heavy Use of Alcohol and Tobacco
- Antisocial Behavior
- Percentage at Risk
- Percentage with Protection
- Sources and Places of Alcohol and Cigarette Use

### Contacts for Prevention

community. If 70% or more of the students participated, the report is a good indicator of the levels of substance use, risk, protection, and antisocial behavior. If fewer than 70% participated, a review of who participated should be completed prior to generalizing the results to the entire community.

The survey was sponsored by Nebraska Partners in Prevention (NePiP), and was administered by the Nebraska Health and Human Service System's Office of Mental Health Substance Abuse and Addiction Services and the Nebraska Department of Education, with assistance from the NePiP Data Monitoring Work Group, the State Survey Design Work Group, the Pacific Institute for Research and Evaluation, the Southwest Prevention Center of the University of Oklahoma; and Bach Harrison, L.L.C.

## Risk and Protective Factors

Many states and local communities have adopted the Risk and Protective Factor Model to guide their prevention efforts. The Risk and Protective Factor Model of Prevention is based on the simple premise that to prevent a problem from happening, we need to identify the factors that increase the risk of that problem developing and then find ways to reduce the risks. Just as medical researchers have found risk factors for heart disease such as diets high in fat, lack of exercise, and smoking; a team of researchers at the University of Washington have defined a set of risk factors for youth problem behaviors.

Risk factors are characteristics of school, community, and family environments, as well as characteristics of students and their peer groups that are known to predict increased likelihood of drug use, delinquency, school dropout, teen pregnancy, and violent behavior among youth.

Dr. J. David Hawkins, Dr. Richard F. Catalano, and their colleagues at the University of Washington, Social

## Additional Information on Risk and Protective Factors

Development Research Group have investigated the relationship between risk and protective factors and youth problem behavior. For example, they have found that children who live in families with high levels of conflict are more likely to become involved in problem behaviors such as delinquency and drug use than children who live in families with low levels of family conflict.

Protective factors exert a positive influence or buffer against the negative influence of risk, thus reducing the likelihood that adolescents will engage in problem behaviors. Protective factors identified through research reviewed by Drs. Hawkins and Catalano include social bonding to family, school, community and peers; healthy beliefs and clear standards for behavior; and individual characteristics. For bonding to serve as a protective influence, it must occur through involvement with peers and adults who communicate healthy values and set clear standards for behavior.

Research on risk and protective factors has important implications for prevention efforts. The premise of this approach is that in order to promote positive youth development and prevent problem behaviors, it is necessary to address those factors that predict the problem. By measuring risk and protective factors in your community, factors that are particularly high (or low) can be identified. These factors may be especially important ones to address. For example, if academic failure is identified as an elevated risk factor in a community, then mentoring, tutoring, and increased opportunities and rewards for classroom participation can be provided to improve academic performance.

The chart at the right shows the links between 16 risk factors and the five problem behaviors examined by Drs. Hawkins and Catalano. The check marks have been placed in the chart to indicate where at least two well designed, published research studies have shown a link between the risk factor and the problem behavior.

YOUTH AT RISK	PROBLEM BEHAVIORS				
	Substance Abuse	Delinquency	Teen Pregnancy	School Drop-Out	Violence
<b>Community</b>					
Availability of Drugs and Firearms	✓				✓
Community Laws and Norms Favorable Toward Drug Use	✓

Lack of Commitment to School	✓	✓	✓	✓	
<b>Individual/Peer</b>					
Alienation and Rebelliousness	✓	✓		✓	
Friends Who Engage in a Problem Behavior	✓	✓	✓	✓	✓
Favorable Attitudes Toward the Problem Behavior	✓	✓	✓	✓	
Early Initiation of the Problem Behavior	✓	✓	✓	✓	✓

## How to Read the Charts in this Report

There are four types of charts presented in this report: 1) substance use and antisocial behavior charts, 2) risk factor charts, 3) protective factor charts, and 4) charts indicating sources and contexts for use of alcohol and cigarettes. All the charts show the results of your community's 2003 Risk and Protective Factor Student Survey data compared to the overall state data. The actual percentages from the charts are presented in a table format at the end of this report.

### Substance Use and Antisocial Behavior Charts

This report contains information about alcohol, tobacco and other drug use (referred to as ATOD use throughout the report) and other problem behaviors of students. The bars on each chart represent the percentage of students in the selected grades who reported the behavior. For example, for the overall state, approximately 70 percent of students in high school reported that they 'ever used alcohol'. This means that 70 percent of the high school students reported that they had tried alcohol at least once in their lifetime. The four sections in the charts represent different types of problem behaviors. The definitions of each of the types of behavior are provided below.

- **Ever-used** is a measure of the percentage of students who tried the particular substance at least once in their lifetime and is used to show the level of experimentation with a particular substance.
- **30-day use** is a measure the percentage of students who used the substance at least once in the 30 days prior to taking the survey and is a more sensitive indication of the level of current use of the substance.
- **Binge drinking** (five or more drinks in a row during the two weeks prior to the survey) and **30-day use of a pack or more of cigarettes per day** are measures of heavy use of alcohol and tobacco.
- **Antisocial behavior (ASB)** is a measure of the percentage of students who report **any involvement** with the antisocial behaviors listed in the charts **in the past year**. In the charts, antisocial behavior will often be abbreviated as ASB.

- **Dots** are used on the charts to show the overall state average for all of the youth in each grade who participated in the 2003 survey. The dots allow a community to compare the results from their youth to youth in grades 6, 8, 10, and 12 throughout the state who participated in the survey. Information about other students in the state can be helpful in determining the seriousness of a given level of problem behavior. For example, if the percentage of students in your community engaging in a problem behavior is significantly higher than the state average, it is most likely an issue of concern and merits attention.

### Risk and Protective Factor Charts

In order to make the results of the 2003 Nebraska Risk and Protective Factor Student Survey more useable, risk and protective profiles were developed that show the percentage of youth at risk and the percentage of youth with protection on each scale. Students are defined as being at risk if their score for that factor exceeds the score that was at the 44<sup>th</sup> percentile in a large study conducted in seven different states. The seven states included in the norm group were Colorado, Illinois, Kansas, Maine, Oregon, Utah, and Washington. Students are defined as having a protective factor when their score for the protective factor exceeds the 56<sup>th</sup> percentile score for the seven-state study. The seven-state values are shown on the charts as a dashed line. As with the Substance Use and Antisocial Behavior Charts, the dots on the Risk and Protective Factor Charts show the average of all youth who were surveyed in the state.

### Sources and Places of Alcohol and Cigarette Use Charts

The percentage of students who obtained alcohol and cigarettes from specific sources and the percentage who used alcohol and cigarettes in specific places in the past year is shown in charts for each grade. The percentages are based upon only those students who used alcohol (for alcohol questions) or cigarettes (cigarette questions) in the past year. Also included in the charts is the percentage of students who reported that an adult was present when they used alcohol or cigarettes.

# Tools for Assessment and Planning

## School and Community Improvement Using Survey Data

### Why Conduct the Risk and Protective Factor Survey?

Data from the Nebraska Risk and Protective Factor Student Survey can be used to help schools and communities assess current conditions and identify and prioritize local prevention issues. The risk and protective factor profiles provided by this survey reflect underlying conditions that can be addressed through specific types of interventions that have been proven to be effective in either reducing risk(s) or enhancing protection(s). The steps for conducting a comprehensive and effective prevention planning process are outlined in detail in the Nebraska Partners in Prevention “Evidence-Based Planning Toolkit”, which can be downloaded at [www.nebraskaprevention.org](http://www.nebraskaprevention.org), or obtained in print form by contacting the Nebraska Behavioral Health Prevention Program at (402) 479-5573. This toolkit can help your school and community identify, prioritize and address specific needs; make key decisions regarding allocation of resources; and select and implement effective strategies that will result in sustainable outcomes

### What are the numbers telling you?

Review the charts and data tables presented in this report. Using the table below, note your findings as you discuss the following questions.

- Which 3-5 risk factors are of the greatest concern?
- Which 3-5 protective factors are your community’s highest priority?
- Which levels of 30-day drug use are of greatest concern?
  - Which substances are your students using the most?
  - At which grades do you see unacceptable usage levels?
- Which levels of antisocial behaviors are of greatest concern?
  - Which behaviors are your students exhibiting the most?
  - At which grades do you see unacceptable behavior levels?

### How to decide if a rate is unacceptable.

- **Look across the charts** – which items stand out as either much higher or much lower than the others?
- **Compare your data with statewide and national data** – differences of 5% between local and other data are probably significant.
- **Determine the standards and values held within your community** – For example: Is it acceptable in your community for a percentage of high school students to drink alcohol regularly as long as that percentage is lower than the overall state rate?

### Use these data for planning.

- **Substance use and antisocial behavior data** – identify issues, raise awareness about the problems, and promote school and community dialogue.
- **Risk and protective factor data** – identify key objectives that will help your school or community achieve its prevention goals.
- **Science-Based and Promising Strategies** – The Nebraska Partners in Prevention “Guidance Document for Science-Based and Promising Substance Abuse Prevention Strategies”, provides information on science-based and promising policies, practices and programs that have been proven effective in decreasing substance abuse. This document is scheduled for a February 2004 release, and will be available for download at [www.nebraskaprevention.gov](http://www.nebraskaprevention.gov) or by contacting the Nebraska Behavioral Health Prevention Program at (402) 479-5573.

<b>Table 2. Scales that Measure the Risk and Protective Factors Shown in the Profiles</b>	
Additional risk factor measures based upon archival data can be found on the Nebraska prevention web site <a href="http://www.nebraskaprevention.gov/pdf/SICA_RFA.pdf">http://www.nebraskaprevention.gov/pdf/SICA_RFA.pdf</a> pages 52-53	
<b>Community Domain Risk Factors</b>	
<b>Community Disorganization</b>	Research has shown that neighborhoods with high population density, lack of natural surveillance of public places, physical deterioration, and high rates of adult crime also have higher rates of juvenile crime and drug selling.
<b>Laws and Norms Favorable Toward Drug Use</b>	Research has shown that legal restrictions on alcohol and tobacco use, such as raising the legal drinking age, restricting smoking in public places, and increased taxation have been followed by decreases in consumption. Moreover, national surveys of high school seniors have shown that shifts in normative attitudes toward drug use have preceded changes in prevalence of use.
<b>Perceived Availability of Drugs and Handguns</b>	The availability of cigarettes, alcohol, marijuana, and other illegal drugs has been related to the use of these substances by adolescents. The availability of handguns is also related to a higher risk of crime and substance use by adolescents.
<b>Community Domain Protective Factors</b>	
<b>Opportunities for Positive Involvement</b>	When opportunities are available in a community for positive participation, children are less likely to engage in substance use and other problem behaviors.
<b>Family Domain Risk Factors</b>	
<b>Parental Attitudes Favorable Toward Antisocial Behavior &amp; Drugs</b>	In families where parents use illegal drugs, are heavy users of alcohol, or are tolerant of children's use, children are more likely to become drug abusers during adolescence. The risk is further increased if parents involve children in their own drug (or alcohol) using behavior, for example, asking the child to light the parent's cigarette or get the parent a beer from the refrigerator.
<b>Poor Family Management</b>	Parents' use of inconsistent and/or unusually harsh or severe punishment with their children places them at higher risk for substance use and other problem behaviors. Also, parents' failure to provide clear expectations and to monitor their children's behavior makes it more likely that they will engage in drug abuse whether or not there are family drug problems
<b>Family Domain Protective Factors</b>	
<b>Family Attachment</b>	Young people who feel that they are a valued part of their family are less likely to engage in substance use and other problem behaviors.
<b>Opportunities for Positive Involvement</b>	Young people who are exposed to more opportunities to participate meaningfully in the responsibilities and activities of the family are less likely to engage in drug use and other problem behaviors.
<b>School Domain Risk Factors</b>	
<b>Low Commitment to School</b>	Surveys of high school seniors have shown that the use of hallucinogens, cocaine, heroin, stimulants, and sedatives or nonmedically prescribed tranquilizers is significantly lower among students who expect to attend college than among those who do not. Factors such as liking school, spending time on homework, and perceiving the coursework as relevant are also negatively related to drug use.
<b>School Domain Protective Factors</b>	
<b>Opportunities for Positive Involvement</b>	When young people are given more opportunities to participate meaningfully in important activities at school, they are less likely to engage in drug use and other problem behaviors.

**Table 2. Scales that Measure the Risk and Protective Factors Shown in the Profiles (Continued)**

<b><i>Peer-Individual Risk Factors</i></b>	
<b><i>Early Initiation of Antisocial Behavior and Drug Use</i></b>	Early onset of drug use predicts misuse of drugs. The earlier the onset of any drug use, the greater the involvement in other drug use and the greater frequency of use. Onset of drug use prior to the age of 15 is a consistent predictor of drug abuse, and a later age of onset of drug use has been shown to predict lower drug involvement and a greater probability of discontinuation of use.
<b><i>Attitudes Favorable Toward Antisocial Behavior and Drug Use</i></b>	During the elementary school years, most children express anti-drug, anti-crime, and pro-social attitudes and have difficulty imagining why people use drugs or engage in antisocial behaviors. However, in middle school, as more youth are exposed to others who use drugs and engage in antisocial behavior, their attitudes often shift toward greater acceptance of these behaviors. Youth who express positive attitudes toward drug use and antisocial behavior are more likely to engage in a variety of problem behaviors, including drug use.
<b><i>Perceived Risk of Drug Use</i></b>	Young people who do not perceive drug use to be risky are far more likely to engage in drug use.
<b><i>Gang Involvement</i></b>	Youth who belong to gangs are more at risk for antisocial behavior and drug use.
<b><i>Peer-Individual Protective Factors</i></b>	
<b><i>Social Skills</i></b>	Young people who are socially competent and engage in positive interpersonal relations with their peers are less likely to use drugs and engage in other problem behaviors.
<b><i>Belief in the Moral Order</i></b>	Young people who have a belief in what is “right” or “wrong” are less likely to use drugs.
